

# Opensource & As we see it

Edualgo Academy was started with an opensource project and became a small startup that has trained 250+ students with different technologies.

# How to contribute to opensource ?

01

Meet people who are interested in similar things

02

Find mentors and teach others

03

Build public tools that help you grow a reputation and influence

# 01

Collaboration: Open source projects can accept changes from anybody in the world.

# 02

Adoption and remixing: Open source projects can be used by anyone for nearly any purpose.

# 03

Transparency: Anyone can inspect an open source project for errors or inconsistencies.

# Reasons To Start an Opensource Project

# How to find users of your project ?

What makes your project different or interesting? Why did you create it? Answering these questions for yourself will help you communicate your project's significance. Remember that people get involved as users, and eventually become contributors, because your project solves a problem for them. As you think about your project's message and value, try to view them through the lens of what users and contributors might want.

# Regarding Legal Side and License

MIT, Apache 2.0, and GPLv3 are the most popular open-source licenses, but there are other options to choose from. You can find the full text of these licenses, and instructions on how to use them, on [choosealicense.com](https://choosealicense.com).

When you create a new project on GitHub, you'll be asked to add a license.

# Community

There is no meaning of opensource without a community, but how to involve people ?

**Make it easy for someone to use your project**

**Clearly explain how to contribute**

**Good first issues: To help new contributors get started**

# What's next

It's simple, jump to the Edualgo Academy's OSS site and pick a project, connect with the mentor and you are ready to start your journey in the world of opensource.
